Status	Test	Certainty	Extreme
Scope			

DESCRIPTION	INSTRUCTION
Flash Flooding Risk: Heavy and/or prolonged rainfall may cause rapid rises in water levels and flash flooding, particularly in low-lying areas, river channels, drainage systems, and locations with poor drainage. The event may pose a significant threat to people, property, roads, and critical infrastructure.	Safety Instructions: Stay alert and follow official instructions from the National Directorate of Meteorology and Geophysics (DNMG) and relevant authorities. Avoid crossing flooded roads, rivers, streams, or areas with fast-moving water. Move to higher ground immediately if flooding occurs or if evacuation is advised. Keep away from bridges, drainage channels, and other areas prone to flooding. Monitor official weather updates and emergency information, and contact emergency services if assistance is required. This is a TEST ALERT. No immediate action is required unless otherwise instructed.
